OBJECTIVE

Computer Science undergraduate and passionate builder with a strong foundation in software engineering, object-oriented design. Eager to design, implement, and maintain features for cloud services by leveraging coding expertise in Python, Java, C, and C++. Committed to writing high-quality code, contributing to backend REST APIs, and utilizing modern SDLC management to engineer scalable technology solutions.

EDUCATION

Lovely Professional University, Punjab <i>B. Tech in Computer Science and Engineering — CGPA: 7.1</i> Relevant Coursework: Data Structures, Algorithm Design, Object-Oriented Programming, Complexity Analysis, Relational Databases.	2027 <i>Jalandhar, Punjab</i>
Race Junior College <i>Senior Secondary (12th Grade) — Percentage: 75.6%</i>	2023 <i>Kurnool, Andhra Pradesh</i>
De Paul High School <i>Secondary School Certificate (10th Grade) — Percentage: 99.8%</i>	2021 <i>Kurnool, Andhra Pradesh</i>

TECHNICAL SKILLS

Programming Languages: C, C++, Java, Python
Backend & Cloud Concepts: REST APIs, FastAPI, Multi-tiered Systems, Distributed API Integration, Backend Architecture
Computer Science Fundamentals: Object-Oriented Design (OOD), Data Structures & Algorithms (DSA), Full SDLC Development, Complexity Analysis.
Databases: SQL(MySQL), NoSQL (MongoDB)
Tools & Modern Practices: Git, Linux Terminal, Software Testing, Machine Learning Integration

PROJECTS

Seed Quality Analysis System <i>Python, Backend Architecture, SDLC</i> GitHub	May 2026
- Designed and coded the full SDLC of a data classification system, utilizing modern engineering practices to achieve a 94.5% validation accuracy - Engineered a highly responsive backend architecture using Python and FastAPI to process incoming data streams and RESTful requests - Executed real-time model inference with under 50ms latency, assisting with service reliability and performance	
Scalable Credit Scoring Engine <i>Python, Relational Databases, REST APIs</i> GitHub	March 2026
- Developed a predictive analytics engine utilizing optimization mathematics and complex datasets to achieve high accuracy and system reliability - Built and maintained scalable inference APIs, ensuring seamless distributed integration into broader software applications - Translated abstract problem statements into clear technical requirements, presenting data-driven solutions and system explainability tools to stakeholders	
Autonomous Health Care Agent <i>Python, Object Oriented Design</i> GitHub	January 2026
- Architected a modular evaluation pipeline using strict object-oriented design principles and advanced parsing algorithms to maximize system accuracy - Navigated highly ambiguous problem spaces to build an autonomous reasoning framework capable of processing complex, unstructured text data - Leveraged abstract thinking to design adaptable backend logic, directly contributing to automated data analytics workflows and optimized infrastructure
